

Health and safety procedures

Group rooms and corridors

- Significant changes such as structural alterations or extensions are reported to Ofsted. A risk assessment is done to ensure the security of the building during building work.
- Door handles are placed high, or alternative safety measures are in place.
- Chairs are stacked safely and not too high.
- There are no trailing wires; all radiators are guarded.
- Windows are opened regularly to ensure flow of air.
- Floors are properly dried after mopping up spills.
- Staff and visitors remove outdoor shoes in baby areas.
- Children do not have unsupervised access to corridors.
- Floor covering on corridors is checked for signs of wear and tear.
- Materials and equipment are not generally stored in corridors, but where this is the case, it does not block clear access or way out.
- Walkways are uncluttered and adequately lit.
- Corridors are checked to ensure that safety and security is maintained, especially in areas that are not often used, or where there is access to outdoors
- Socket safety inserts are used to avoid the risk of items being put in the socket. Modern plug sockets are designed to remove risk of electrocution if something is poked into them, however as a setting the risk has been assessed and safety inserts are more appropriate. Socket covers (that cover the whole socket and switch) may be used, please note these are different to socket inserts.
-
- The use of blinds with cords is avoided. Any blinds fitted with cords are always secured by cleats. There are no dangling cords.
